

Cradle Lift

This is the cradle lift Glenn Goldfinch built for Rob Luck's Nagari project.

“As you can see it is adaptable to most Bolwells and probably a lot of other cars too. I understand Glenn will make the unit available for hire to Club Members at a reasonable price when available. I understand he prefers to accompany the lift in most cases to help set-up. There may be cases where experienced restorers don't need his on-site assistance. I think Bolwell owners looking to utilise the lift would need to plan their moves well in advance, but this is normally the case anyway.

From my experience, the lift is quickly and easily set-up, worked perfectly and easily lifted the body on/off the chassis (our initial set-up and lift took about an hour). It is simple to control the body when lifted and position it correctly for remounting on the chassis. Glenn selected a slightly nose-up set-up as raising/lowering the body progressively gives better control.” - Rob
